The LIGHT JAB is an innovative bait drawn and developed by hand, made of a special metal alloy.

The particular shape and perfect balance give this bait an incredible sinking asset and a great stability while retrieving, allowing you to personalize your fishing.

It is especially designed for off-shore fishing of pelagic fish schools when you need slow retrieval or slow sinking, but it is also ideal for fast linear retrieval.

It is available in the size of 28 g (1 Oz), so it can also be used for ground-fish on medium-low sea bottoms using typical slow pitch movements.

The BLASTER is a lead bait drawn and developed by hand, catchy with a linear retrieve or with small jerking movements, based on how the fish react, and while fast sinking. It is designed to cast greater distances and its impeccable stability allows maximum precision.

You can find two different sizes, 14 g (0.5 Oz) and 28 g (1 Oz), to face to the best your demand in the different angling situations.

The colorations were suitably studied during the period of testing to have the best results and increase predators' aggressiveness.

The target is for bluefish and pelagic fish schools like tuna, bonitos, dolphinfish and mackerels.
